

CARE

Washington County Memorial Hospital cares for every patient entrusted to our care. The new 24/7 physician coverage for inpatients will be a great addition to that care! Coming April 2019.

What is a Hospitalist?

A hospitalist is a physician that takes care of patients admitted to the hospital for inpatient care.

What does this mean for patients?

This means that there will be a physician available 24/7 for all inpatients at WCMH.

Will my primary provider know that I am in the hospital?

Yes! Our hospitalists will be able to communicate care plans to your primary care provider and arrange for follow up visits after your admission.

What does this mean for our community?

Patients that may have been transferred to a farther away hospital, may now be able to stay closer to home if they need a hospital admission.
